

Perform Rescue from a Live LV Panel Provide Cardiopulmonary Resuscitation (CPR)

Competency Training offers nationally recognised CPR and Low Voltage Rescue training, either run in succession or as standalone courses.

The CPR and LVR course combined is delivered over a day and covers CPR requirements for all licenced electricians. In addition, Competency Training also includes a section on Substation Safety/Access, which provides familiarisation with substation equipment and procedures; preparing personnel to be authorised for access to a substation

The CPR component enables participants to perform CPR in accordance with the Australian Resuscitation Council (ARC) Guidelines and meets the requirement for annual CPR refresher training for electrical personnel.

The Low Voltage Rescue course covers topics including Hazard Identification, Risk Management, Emergency Equipment and Low Voltage Rescue Procedures, including the use of a Low Voltage Rescue Kit during the training. Participants must demonstrate a simulated rescue scenario using the rescue kit and fire blanket.

In recognition of our client bases, we discuss site emergency procedures where 000/ambulance isn't the main emergency contact, and if site emergency procedures are provided ahead of time, the instructor will refer to them during the training.

This course also meets the requirement for annual CPR refresher training for electrical personnel.

Please contact us for further information on this course.

Duration

1 day (Four hours for each component)

Prerequisites

HLTAID001 Provide Cardiopulmonary Resuscitation is a prerequisite to completing UETDRRF06B Perform Rescue from a live LV panel

Why Competency Training?

Our courses are delivered by qualified, experienced trainers who have experience across multiple disciplines. Competency Training offers the flexibility of either delivering the courses on site, using the client's own equipment and tailored training material.
