

High Performance Workforce Solutions

NHP Electrical Engineering Products and Competency Training are combining forces to offer high performing workforce solutions for Hazardous Area (HA) training throughout Australia and New Zealand.

NHP supplies more than 75,000 quality products to a range of key sectors including resources, manufacturing, water and wastewater, infrastructure, commercial buildings, pulp, paper and timber, processing plants and food and beverage. With 49 locations across Australia and New Zealand, NHP offers a complete industrial, electrical and automation solutions package.

Competency Training is one of Australia's leading Registered Training Organisations. As a provider of holistic site training and enabler of high performance workforces, Competency Training delivers high quality graduates to industry, and supports their career progression from start to finish.

Together NHP and Competency Training are meeting the challenge of delivering qualifications in HA training to Australasian workforces. The collaboration between NHP and Competency Training tailors solutions to ensure workforces are able to execute processes safely within a high performing environment.

Harness real world experience through customised HA training solutions to deliver workers who are job-ready and compliant for Australian and New Zealand worksites.

Case Study

The challenge for many competitive electrical engineering companies is finding a solution that goes beyond the purchase and installation of the latest products and systems. It's about ensuring their employees know how to work those systems safely.

Workers at all skills levels – from trainees through to experienced employees – need to hold the relevant competencies to work within a HA. Additionally, there is the regulatory need to update HA training every few years.

At the heart of a client's need is a holistic solution in the complex area of HA training and the maintenance and operation of a HA facility.

In providing a complete fit-for-purpose systems service, NHP systems and products will be installed across hundreds of businesses annually, with Competency Training educating workers who use the products NHP supplies.

The deliverables for clients encompass:

- A uniquely holistic HA approach, diverging significantly from other offers which focus on either electrical engineering or training, not both.
- Substantial improvement in clients' ability to maximize productivity of electrical and engineering products in safer working environments.
- Cost effective and timely solution delivery, integrating training to Australian and NZ standards.
- Minimisation of training downtime and cost, allowing clients to reallocate funding towards broader business objectives.
- NHP-hosted HA training on site around Australia and New Zealand.

“We want high performing teams – we want to be the best.

But how do we keep growing unless our workers have the right skills, keep learning and build on their knowledge?”

Delivering Australian Standards for Global Workforces

Safety and site specific performance HA training has moved upstream for project owners.

As part of Australian regulatory requirements, the onus is on companies to educate workers to recognised accreditation and Australian and New Zealand specific qualifications.

These qualifications are not only highly desirable, but necessary for workers to be engaged on Australasian projects.

As solutions providers, NHP and Competency Training focus on upskilling and qualifying workers to the very highest standards.

We offer:

- A holistic approach for the electrical engineering industry as a single source provider of HA training solutions.
- Qualified HA educators grounded in real world experience and up to date with changes to regulations and legislation.
- Comprehensive support to deliver the highest industry standards in safety and compliance.

Life-cycle training solutions

- Cost effective HA training solutions delivered on time and to budget.
- We professionally and seamlessly deliver world-class education to meet changing challenges in the electrical engineering industry and to minimise training downtime.
- Companies can introduce new equipment to their workforce, confident they are appropriately skilled and meet certifications.

“The need to maintain compliance doesn’t begin and end with a course – it’s got to be understood, embraced and practiced by the entire workforce.”

Meet the high performance workforce challenge

We educate industry compliant HA workers across Australia and New Zealand.
